

PLASMA - LCD MONITOR/TV MEASURING GUIDE

Measuring your screen is easy, but please do recheck your dimensions to ensure a perfect case & fit!

EASY TIP: Pushing your LCD/PLASMA next to a wall takes away a lot of recheck + guess work....you can measure from the WALL to the front of the screen etc = easy!

1. Don't trust website, brochure or ANY manufacturer's literature.
2. It's easy, however PLASMA & LCD panels require PRECISE dimensions.
3. Check for any protrusions such as feet, knobs front, cable lugs rear, etc.
4. Don't add "margins", don't round up or down, measure precisely

Measure precise, measure "sober"! Recheck!

Corporations, please do NOT delegate this job to juniors or people without basic mathematical skills [polite, aren't we!].

D1 = Overall depth of stand/monitor

D2 = Thickness of Screen

D3 = front of stand to front of monitor

W1 = overall width (check top, middle & lower panel to ensure they're the same!)

W2 = stand width

W3 = Width till Flat Edge [If Applicable]

H1 = overall height

H2 = floor to bottom of monitor

All dimensions are critical. we can't make a perfect case without one of them.
